

QUESTION BANK

Unit-1

Q.NO	Question:
1.	Explain runtime polymorphism.
2.	Explain super keyword.
3.	Explain different types of access control available in Java.
4.	Explain nested classes.
5.	Explain scanner.
6.	Explain the concept of passing object as a parameter to the constructor.
7.	Write a note on normal import and static import.
8.	Write note on mutable and immutable.
9.	Write down uses of scanner class.
10.	Explain the use of this keyword.
11.	What is polymorphism? Explain the compiletime & runtime polymorphism. [7]
12.	What are the naming conventions for packages?
13.	Differentiate between run time and compile time polymorphism.
14.	How accessors and Mutators methods are used?
15.	Differentiate between method and constructor.
16.	Explain the concept of overloading.
17.	Explain Abstract class and Interfaces.

Unit-2: Collection

Q.NO	Question
1.	Explain list collection with example.
2.	Differentiate arraylist and vector.
3.	Explain TreeSet with example.
4.	Explain different types of constructor available in Thread class.
5.	Explain synchronized keyword.
6.	Explain use of Finalize method.
7.	Explain thread life cycle.
8.	Explain checked exception with example.
9.	Define set and explain insertion operation in hash set with example.
10.	Differentiate Array list & vector.

11.	Explain unchecked exceptions with the suitable example.
12.	Explain thread priorities with proper example.
13.	What is the meaning of thread-deadlock? Illustrate it with a suitable example.
14.	Define array list. Write a program to accept search element from the user to find it from given array list.
15.	What is the meaning of hashing? Explain with a suitable example for insert operation in Hash map.
16.	Write a note on TreeSet & TreeMap.
17.	Write a short on List interface.
18.	What is thread synchronization?
19.	Explain how deadlock can be avoided in thread. What is object serialization?

Unit-3

	Explain prepared statement.
	Create table "STUDENT" with fields (Roll No, Sname and saddress). Perform insertion and updation through Java application into "STUDENT" table.
	Create JDBC application for a table with fields Id, name & price. Perform insert operation & display inserted data retrieved from table to the user.
	Explain types of driver in Java.
	Differentiate between Array list and Linked list.
	Explain thread life cycle.
	What is Hashing in collection Framework.
	What is the difference between the Enumeration and Iterator interface?

Unit-4

	Your College is organizing cultural events, create a simple application using servlet to collect information like name, class, gender in which activity he is interested to participate and store this data in database. [8]
	Explain servlet life cycle.
	Create a web page using servlet to accept two numbers from user & display the addition of given numbers.
	Create a web page by using servlet to find factorial of a given number.

	Design a following phone book application in JSP for accepting employee details like: first name, last name, city name and email Id and save it in database. Perform following operations :- [8] i) record in database ii) retrieve all records in database iii) update a record from database iv) delete a record from database
	Differentiate between JSP and servlet.
	Write a servlet program for accepting student detail. Display proper/ message if invalid data is entered like name left blank and negative phone number, using MgSQL store the values in the table stud (Name, Address, Phone, Email) if valid data is entered for all the fields and perform the various operations like Add, Delete, Next and previous. [8]
	Write servlet to accept student information from HTML page, and store the details in a database. [Note: Take suitable fields. [8]
	Explain servlet life - cycle.
